

Raj Aaryan

+91 8789718713 | rajaryangpj@gmail.com | linkedin.com/in/raj-aaryan-28484b159

Skills

- **Languages:** Java, C++, Python, JavaScript
- **Frameworks & Technologies:** Spring Boot, Kafka, REST APIs, Camunda, Microservices, Elasticsearch, Redis
- **Tools & Concepts:** Git, System Design (LLD/HLD), OOP, Design Patterns, SOLID Principles, DSA, MySQL, DynamoDB

Work Experience

Jio Platforms Limited

Jul 2022 – Present Software Development Engineer

- Led end-to-end automation of the order orchestration pipeline handling 20K+ enterprise orders, reducing processing latency by 97% and eliminating manual intervention.
- Developed a fault-tolerant fallout management system to detect and auto-recover upstream failures, improving reliability across 5+ microservices.
- Architected centralized logging, managing 10GB+ of logs per day using Elasticsearch and Kibana, reducing production debugging time by 30%.
- Built a Composition Engine to aggregate multiple resource pools into unified orders, improving throughput and reducing system complexity.
- **Technologies:** Java, Spring Boot, Microservices, Kafka, Kubernetes, MySQL, Elasticsearch, DynamoDB, Redis

Samsung Electronics

Aug 2021 – Jun 2022 Software Engineer Intern

- Developed secure encryption mechanisms for storage and transmission, improving data security and reducing vulnerability exposure across critical components.
- Performed system-level debugging and firmware optimization, reducing power consumption and improving efficiency.
- **Technologies:** C++, GitLab, OOP, Design Patterns

Mormugao Port Trust

May 2019 – Jul 2019 Summer Intern

- Developed and automated a GUI-based ID card generation system for 6,000+ employees, reducing manual effort and improving processing efficiency.
- **Technologies:** Java Swing, SQL

Projects

Amazon Locker System – Low-Level Design

Java, OOP, Design Patterns

- Designed extensible backend architecture using Strategy and Factory patterns for locker allocation and management.
- Modeled concurrency handling, time-based expiry, and availability tracking to ensure consistency and efficient resource utilization.

Distributed Rate Limiter – Low-Level Design

Java, Redis, Microservices

- Designed a distributed rate limiter using token bucket and sliding window algorithms to handle high-throughput API traffic.
- Implemented Redis-based atomic counters and expiry mechanisms to ensure consistency across distributed instances.
- Addressed edge cases such as burst traffic, race conditions, and failure handling to maintain system reliability.

Education

BITS Pilani (Pilani Campus)

2017 – 2022

Dual Degree: B.E. in Electronics & Instrumentation, M.Sc. in Mathematics

Achievements

- Received MCN Scholarship for 10 consecutive semesters for academic excellence.
- Achieved highest performance rating in current role at Jio Platforms.
- Mentored intern on system design and onboarding, improving team productivity.
